

COWORK OS GUIDE

# Admin PA

Your personal assistant's home base

*From catch-all inbox to conversational second brain. No code required.*

---

## THE CONCEPT

# What Is Admin PA?

Admin PA is two things working together. First, it's a **dedicated work area** inside CoWork OS — a set of folders where general tasks, system reviews, and day-to-day admin live. Second, there's an optional **Personal Assistant plugin** — a dedicated instruction set that turns this area into a conversational personal assistant you can just talk to.

The folders work on their own from day one. The plugin activates when you're ready to level up — see the Plugins Installation Guide for how to install it.

**Admin PA lives at WORK AREAS/Admin-PA/.** When you ask Claude for something that doesn't clearly belong elsewhere, it goes here. If you'd rather it go somewhere else, just say so — "move this to Business" or "this belongs in Marketing."

## TODAY

# What It Does Right Now

### Quick Tasks

Need a quick email drafted, a document converted, or some research done? If it's not part of a bigger project, it lives here.

### System Reviews

The System Review skill saves its reports to a system-reviews-project/ subfolder here. Your self-improving feedback loop stays organised in one place.

### First Week Guide Outputs

When you run through the First Week Guide, your practice outputs land here in first-week-guide-project/.

### General Admin

Invoices, receipts, scheduling — anything that's more "running your life" than working on a specific project.

Even quick tasks get project folders (with the **-project** suffix) so everything stays findable. A one-off research task becomes **quick-research-project/** with an outputs/ folder.

# The Personal Assistant Plugin

The Personal Assistant plugin is the dedicated instruction set that turns Admin PA into a conversational second brain. Install it from the Better Creating marketplace (see the Plugins Installation Guide) and Admin PA becomes an assistant you talk to throughout the day. You narrate. It organises.

**The core idea:** you say "had a call with Sarah about the Q3 launch — she's worried about timeline, need to send her a revised schedule by Friday." Claude automatically creates a task, updates your contact notes for Sarah, and sets a follow-up reminder. No forms. No databases. Just conversation that becomes structured data.

## Captain's Log

A running daily log. You narrate your day conversationally and Claude captures, timestamps, and structures everything behind the scenes.

## Task Tracking

Persistent tasks that survive between sessions. Claude extracts action items from your conversations automatically — no manual task creation.

## Contact CRM

Relationship tracking through conversation. "When did I last talk to Sarah? What did I promise?" — all answered from your logged interactions.

## Daily Briefing

A scheduled morning task that reads your overdue tasks, today's priorities, and follow-up reminders. Start your day knowing what needs attention.

## End-of-Day Summary

Reviews what got done, what's still open, and what's coming tomorrow. Includes prompted reflection — three questions to close your day with intention.

## Slash Commands

Quick actions: /log to capture a thought, /tasks to see what's open, /briefing and /eod on demand, /tidy to clean up your Downloads folder.

## HOW IT WORKS

# Storage That Adapts to You

The PA plugin defaults to **plain text files** — zero dependencies, instant performance, works offline. Your captain's log, tasks, contacts, and preferences all live as simple markdown files inside Admin-PA. No external tools required.

**You don't manage the system — it manages itself.** The user talks. The system organises. Captain's log entries become structured tasks, contacts, and preferences automatically.

# How It Fits Into CoWork OS

## Identity Layer

Your About Me files automatically apply. The PA knows your voice, your preferences, your tools — because CoWork OS already taught it.

## System Review

The monthly System Review naturally reads PA data — spotting patterns, proposing About Me updates, and improving how the system serves you.

## Scheduled Tasks

Daily briefings and end-of-day summaries run automatically as scheduled tasks. The PA leverages CoWork's existing automation layer.

## Connectors

Gmail, Calendar, Notion, Slack — every connector you've already set up makes the PA smarter. Your morning briefing pulls from all of them.

**The plugin is opt-in.** *The Admin PA folders work from day one as your catch-all workspace. The plugin adds the instruction set that turns it into a proper personal assistant — install it when you're ready.*

## RIGHT NOW

## Getting Started with Admin PA

- 1 Use it as your catch-all.**  
Quick tasks, one-off research, anything without a home — just ask Claude and it lands here.
- 2 Run your System Reviews from here.**  
Say "review my system" — the report saves to Admin-PA/system-reviews-project/outputs/.
- 3 Activate the PA plugin.**  
Install the Personal Assistant from the Better Creating marketplace: Customise > Plugins > find 'personal-assistant'. Or say 'set up my personal assistant' and follow the prompts. Everything you've built in Admin-PA carries forward.

Visit **bettercreating.com** for the Agentic Business Accelerator, free skills, system updates, and more.
