

THE AGENTIC BUSINESS METHOD

CASA

Build Your Consolidated Agentic Systems Architecture

C

CONSOLIDATE

A

ARCHITECT

S

SYSTEMATISE

A

ACTIVATE

A four-stage framework for building intelligent systems that simplify and scale your business for the AI era. No technical background required.

The Problem

Most people approach AI the wrong way. They jump straight to the shiny stuff — automations, agents, AI assistants — without building the foundation. It's like running a business from a hotel room. No filing system, no processes, no home base. Everything feels scattered and nothing compounds.

The Solution

CASA fixes this by giving you a structured path. You build in order — each stage creates the foundation the next stage needs. By the end, you have a digital home that works for you: organised, intelligent, and increasingly automatic.

THE FOUR STAGES

C — Consolidate

Get everything into one place. Audit your tools, centralise your information, establish a single source of truth.

A — Architect

Design the blueprint. Map your workflows, plan integrations, decide what connects to what.

S — Systematise

Build the systems. Databases, automations, AI agents, standard processes. Turn your blueprint into working infrastructure.

A — Activate

Launch, optimise, scale. Use the systems daily, refine what doesn't work, let the compound effect take over.

The key insight: *you can't systematise what you haven't consolidated, and you can't activate what you haven't systematised. The order matters.*

C Consolidate

Get everything in one place. Build your foundation.

This is where most people skip ahead, and it's exactly why their systems don't stick. Consolidation means auditing what you have, choosing your core tools, and creating a single source of truth for your information.

What you're doing

- Auditing all the tools, apps, and platforms you currently use
- Identifying what's scattered (files in five places, notes everywhere, no central hub)
- Choosing your core tools and migrating what matters
- Setting up your identity layer — the About Me files that teach AI who you are

In CoWork OS terms

If you're using the CoWork OS template, a lot of this stage is already done for you. The folder structure, the anti-AI writing rules, the memory system, the specialist routing framework — it's all in place. Your job here is to fill in the personal parts: your About Me files, your tool connections, and your voice.

- Fill in about-me.md with real depth (not one-liners)
- Configure writing-rules.md with your personal voice
- Map your tools in my-context-map.md
- Connect your tools through CoWork's connectors

A Architect

Design the blueprint before you build.

With your foundation consolidated, you can now design how everything connects. This is about structure and flow — not just what tools you use, but how information moves between them.

What you're doing

- Mapping your workflows — how tasks move from start to finish
- Designing your project structure and naming conventions
- Planning which domains need specialist agents
- Choosing what to automate vs. what stays manual

In CoWork OS terms

Again, much of this is already scaffolded for you. The RESOURCES/TEMPLATES/ folder, specialist-routing.md, and Work Areas structure are built in. Your job is to customise.

- Review and customise templates for your most common tasks
- Fill in specialist-routing.md with your priority domains
- Plan which specialist agents you'll build or install first
- Define your Work Areas and project structure

THE COWORK FOLDER SYSTEM

RESOURCES/

MY SKILLS/, PLUGINS/, TEMPLATES/, GUIDES/ — everything you reference, not create

WORK AREAS/

Admin-PA/, Business/, Finance/, Marketing/, Personal/ — one subfolder per project

ABOUT ME/

about-me.md, voice-profile.md, writing-rules.md, my-context-map.md, specialist-routing.md, memory.md

S Systematise

Turn your blueprint into working infrastructure.

This is where things get powerful. But before you build automations, take a step back. Analyse your actual work processes. What do you do repeatedly? What takes too long? What could be delegated to an agent? What should stay manual but just needs a clearer process?

The best systems aren't built by automating everything — they're built by being honest about how you work and then making targeted improvements where they matter most.

What you're doing

- Auditing your actual work processes — document what you do, how long it takes, where friction lives
- Deciding what to automate, what to delegate to an agent, and what to keep manual but improve
- Building specialist AI agents for your priority domains
- Setting up scheduled tasks for recurring work (inbox triage, weekly summaries, research)
- Connecting tools so data flows automatically between them

In CoWork OS terms

This is where RESOURCES/PLUGINS/ and scheduled tasks come alive. Use the Specialist Sub-Agent Builder to create custom agents. Install plugins from the included Better Creating marketplace — set it up once and every plugin is available with one click (see the Plugins Installation Guide). Set up scheduled tasks — morning inbox triage, weekly project summaries, content research on autopilot. The key is to be clear on what you do and what you want an agent to help with.

- Audit your weekly work — what's repetitive, high-value, or draining?
- Build your first specialist agent with the Sub-Agent Builder
- Browse and install plugins from the Better Creating marketplace
- Set up at least one scheduled task (inbox triage is a great start)
- Create custom skills for tasks you do repeatedly

A Activate

Use it daily. Let the compound effect take over.

The system is built. Now you use it. This isn't a one-time setup — it's an ongoing relationship. The more you work through your system, the smarter it gets. Memory builds up. Preferences accumulate. Specialist agents learn your patterns.

What you're doing

- Using the system for real work every day
- Reviewing and refining based on what works and what doesn't
- Expanding — adding new specialists, templates, and automations as needs evolve
- Teaching — your memory files and About Me updates make the system better over time

In CoWork OS terms

This is the daily rhythm. Claude reads your memory at the start of every session. Projects accumulate context across Work Areas. Writing rules get more refined. The gap between what you ask for and what Claude delivers shrinks every week.

You can even control your system on the go using the Dispatch feature in the Claude mobile app — send tasks to your CoWork OS from your phone.

The magic of CASA is compounding. *Each session makes the next one better. Each specialist you build makes the whole ecosystem more capable. Each memory entry means less re-explaining. This is why the order matters — you're building on solid ground.*

The Full Picture

CASA isn't just for one tool. It's a method that applies across three interconnected systems, each handling a different layer of your business.

CoWork OS — your flexible top-layer system

Your complete personal assistant and full business automation system. It handles everything from file management to email drafting to scheduled tasks through rich connector integrations. It works across your local files, your connected tools, and even your Notion workspace. Think of it as the system you talk to for all jobs. You can even control it from your mobile using the Dispatch feature in the Claude mobile app.

Notion Business OS — where your wider business lives

Where your wider business team knowledge and context live. This is the place to build out the infrastructure for a business you want to share with others — databases, workflows, CRM, content management, knowledge bases. It's a brilliant place to hold knowledge that both Agent OS and CoWork OS can draw from. *Note: Notion works on any plan, but Notion's custom agents (Agent OS) require a Business plan. You can always connect to Notion from CoWork OS instead — in many cases it works just as well.*

Agent OS — specialist agents native to Notion

A place to build and house specialist agent assistants that you chat to directly in Notion, giving them interactive abilities within your business OS. These are the same concept as the specialist agents you build in CoWork OS (using the Specialist Sub-Agent Builder plugin), but they live inside Notion. You can develop agents in one system and transition them to the other as your needs evolve.

You don't need all three to start. CoWork OS works brilliantly on its own. But when combined, they create a complete intelligent business system — the kind of thing that used to require a team and a budget, built by one person with the right framework.

*Make sure you're on the email list at **bettercreating.com** — that's where free skills, system updates, and improvements get shared first. Check your junk folder. #buildinpublic*

Your First Steps

If you have the CoWork OS template

You're already in Stage 1 (Consolidate). Open the Getting Started PDF, set up your About Me files, and start using it. The onboarding coach guides you through everything.

If you want the full framework

The Agentic Business Accelerator teaches CASA from start to finish — with guided setup, coaching, and a community of fellow builders. It includes all three system templates with progressive onboarding. Wherever you are on your journey, it's designed to meet you there.

If you want to learn by watching

Both YouTube channels — **Systems Made Better** and **Better Creating** — cover AI tools, Notion systems, and the agentic business approach in depth. New videos weekly.

The Agentic Business Accelerator

A structured programme for entrepreneurs who want to build intelligent systems — without needing to be technical. Four modules. Twelve weeks.

One framework that changes how you work.

Whether you're building toward seven figures or the lifestyle business you've always wanted — the systems are the same.
