

COWORK OS GUIDE

Plugins Installation

Install plugins from the Better Creating marketplace

A quick visual walkthrough to get your CoWork OS plugins installed and ready to use.

GETTING SET UP

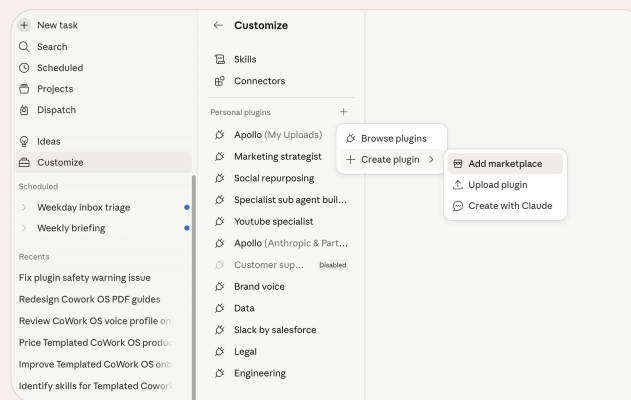

Add the Better Creating Marketplace

CoWork OS plugins install from the Better Creating marketplace. The marketplace will always have the latest plugins available for your system — here's how to set it up.

1

Open the marketplace setup

In a CoWork session, click **Customise** (sliders icon, bottom-left). Go to **Plugins**. Click the **+** button next to "Personal plugins", then select **Add marketplace**.

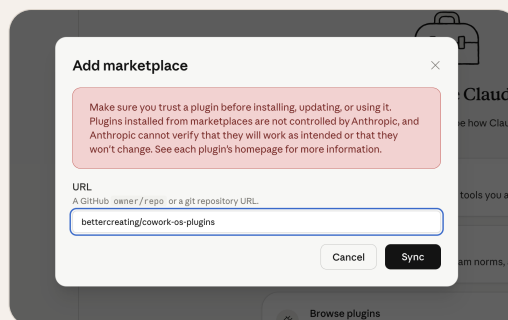

Customise > Plugins > + > Add marketplace

2

Add the Better Creating marketplace

In the dialog that appears, type `bettercreating/cowork-os-plugins` into the URL field. Click **Sync**. You'll see a safety notice — this is normal for all non-Anthropic plugins. Click Sync to confirm.

Enter bettercreating/cowork-os-plugins and click Sync

About the safety warning: Anthropic shows this for every third-party plugin — it's not specific to CoWork OS. These plugins were built by Simon at Better Creating and only contain text-based instructions and connections to your own tools. Nothing risky.

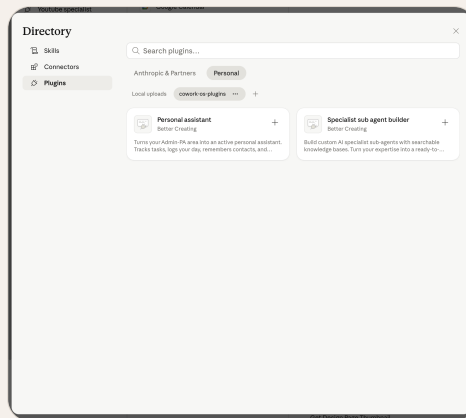

INSTALL

Choose Your Plugins

3

Install the plugins

Now click **Browse plugins** and go to the **Personal** tab. You'll see your available plugins listed under Better Creating. Click the **+** on each one you want to install.

Personal tab — click + on each plugin to install

That's it. Your plugins are now installed and ready to use. Check back in the marketplace any time — new plugins and updates will appear here as they're released.

USING CLAUDE CODE?

Same Process, Different Tab

Install via Claude Code

If you're using CoWork OS in the Claude Code tab instead of CoWork, the process is the same — open **Customise > Plugins**, add the Better Creating marketplace, and install your plugins from there.

TROUBLESHOOTING

Plugins don't appear?

Double-check the marketplace URL is exactly `bettercreating/cowork-os-plugins`. If they installed but skills don't show, close and reopen the Claude app.

Still stuck? Email notion@bettercreating.com with what you tried and any error message.
